DataBank

BLUFFDALE, UTAH

23 ACRES

DATABANK OWNER

LAYTON CONSTRUCTION GENERAL CONTRACTOR

50 MEGAWATTS

CVE DIVISIONS ELECTRICAL CONSTRUCTION, TRANSMISSION LINE & SUBSTATION

PROJECT OVERVIEW

Since 2018, CVE has had the opportunity to be an electrical trade partner for DataBank's Granite Point Campus construction projects. The 23-acre site includes four Tier II data centers (DataBank SLC 2, 3, 4, 5) and a 66 megawatt (MW) substation constructed by CVE's Transmission Line & Substation team. Currently, CVE is working with Layton Construction on the construction of SLC6—DataBank's new 32 megawatt 211,000 square foot Tier II data center.

SCOPE OF WORK-DATABANK SLC6

> 16 MW build out day one, 32 MW total

- Installation of (8) 2750 kW generators,
 (1) 500 kW house generator
- Installation of (8) 3000 kVA pads mount transformers and (1) 1500 kVA house transformer
- Installation of (8) 4000 AMP switchboard lineups
- Installation of (4) 1750 kVA UPS lineups and (4) 2000 kVA UPS lineups
- Installation of (60) 300 kVA PDUs and (12) 750 kVA PDUs
- > Substation expansion including new 138 kV/12.5 kV bay, (2) 138 kV/12.5 kV transformers, (2) 138 kV circuit breakers, (11) 15.5 kV circuit breakers, (2) 145 kV switches, (80) 15.5 kV switches

DataBank, continued from pg 1

DATABANK SLC5

Over 24 months, CVE provided automatic static switching equipment for a new 100,000 square foot facility. CVE successfully constructed the full electrical buildout of 6 UPS rooms including UPSs, medium voltage transformers and 3000 kW generators, house electrical system, two data halls and two-story office area. Scope of work included:

- > Fire alarm, Vesda system, and lightning protection
- > 12 MW block redundant topology
- > 15 kV medium voltage distribution loop
- STSs (Static Transfer Switches) with source 2 being a reserve or catcher system allowing for functional redundancy

DATABANK SLC4

CVE coordinated and executed (3) redistribution outages on existing feeder in a live data center with a 2 MW power adder and annexed a "C" block to two data halls. Scope of work included:

- > Installation of (3) 2,750 kW generators
- Installation of (2) 1,000 kW UPSs, (4) PDUs, and (8) RPPs to an existing facility

DATABANK SLC3

CVE coordinated and executed (3) redistribution outages on existing feeder in a live 425,000 foot data center with a 2 MW power adder and annexed a "C" block to two data halls. Scope of work included:

 Installation of (1) 2,750 kW generator, new switchgear, new 500-ton cooling system

DATABANK SLC2

CVE coordinated and executed (4) redistribution outages on existing feeder in a live data center with a 2 MW power

adder and annexed a "C" block to one data hall. Scope of work included:

- Installation of (1)
 2,750 kW generator
- Installation of (2)
 1,000 kW UPSs, (8)
 PDUs. and (16) RPPs
 to an existing facility

PROJECTS

CMC Steel Arizona 2

MESA, AZ

791,250 SQ FT

COMMERCIAL METALS COMPANY OWNER

CVE DIVISIONS HEAVY INDUSTRIAL, TRANSMISSION LINE & SUBSTATION

PROJECT OVERVIEW

CMC Steel Arizona 2 is a new mill constructed from the ground up and includes steel mill technology never before implemented in the US. This stateof-the-art MIDA QLP micro mill will be the first in the world capable of producing both steel rebar and merchant products with high yield strengths and maximum uptime. It will melt local scrap by the innovative Danieli Digimelter (Q-One, Zero Bucket, Q-Melt) and operate in endless casting-rolling mode with an output of 500,000 tons of long products, namely 350,000 tons of rebar and 150,000 tons of small merchant sections.

CVE's workforce will average 60 to 80 electricians with a peak of 160 to 180. CVE has also assisted in the design of the mill. Plant commissioning is scheduled for 2023.

SCOPE OF WORK

- Design support for engineering and layout
- > Embedded conduit and site utilities from 13.8 kV distribution to 480 V

- Installation of all distribution gear including: substation, medium voltage switch gear, 480 V switch gear, panels, PCR control houses and control cabinets
- > Plant process and network communications
- All process, automation, control, and instrumentation installation
- Substation including: (2) 34.5/13.8 kV transformers, (2) CCVTs, (1) control building

BioMérieux salt lake city, utah

272,000 SQ FT

BIOMERIEUX OWNER

OKLAND GENERAL CONTRACTOR

CVE DIVISIONS MULTIMEDIA, TELEDATA, AVTEC, CVE TECHNOLOGIES GROUP

PROJECT OVERVIEW

CVE's Multimedia group furnished and installed a mixture of productive collaboration rooms and integrated spaces across BioMérieux's new campus—from huddle spaces, medium and large conference rooms, to a large training room with two 165" 3x3 Barco video walls. A mixture of Crestron control and Biamp audio DSPs coupled with Cisco video conferencing endpoints was selected and installed to provide a simple, turnkey solution in each space that is easy to use and simple to deploy.

In addition, Multimedia furnished and installed a Cambridge sound masking system on each of the facility's four levels. This reduces office noise distractions, protects speech privacy, and improves office acoustics.

CVE's Teledata team built out eight communications closets connected to 3000+ Cat6A cables. They also installed a full single mode fiber optic backbone to each of the closets along with a new connection to BioMérieux's existing manufacturing building.

CVE Technologies Group assisted in the design of a Cisco network and wireless solution that includes over 70 switches, 100 access points, and a pair of brand new wireless controllers to support current needs of the office and allow for future growth.

SCOPE OF WORK

- Horizontal cabling and fiber optic backbone
- > Wireless deployment
- Conference rooms / video conference systems, sound masking, direct view LED displays, room scheduling
- Access Control System building doors, vehicle gates integration, elevator integration, lobby turnstiles installation and integration
- CCTV Management System exterior and interior cameras, video storage, network switches

Johnson Creek Substation

BOONEVILLE, IOWA

161 kV MIDAMERICAN ENERGY OWNER

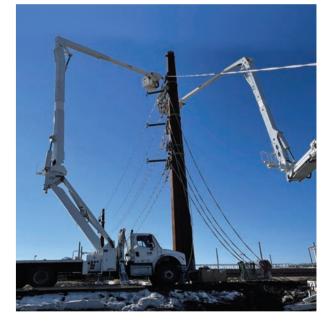

CVE DIVISION TRANSMISSION LINE & SUBSTATION

PROJECT OVERVIEW

Cache Valley Electric's Transmission Line & Substation team recently constructed a new 161 kV substation in a doublebreaker double-bus configuration with two 161 kV line terminals in Booneville, Iowa for MidAmerican Energy.

SCOPE OF WORK

- > Twelve 161 kV circuit breakers > Relocation of an existing
- > Three 161/13.8 kV transformer terminals
- > Three 13.2 kV switchgear units
- Relocation of an existing 161 kV line
- Modifying and energizing two existing 161 kV lines

UTA Ogden Rapid Transit (OGX)

PROJECT OVERVIEW

CVE's Signal & Utility crews are working with Stacy & Witbeck Construction on the new UTA OGX electric bus rapid transit line that will run from Ogden's FrontRunner Station to Weber State University and McKay Dee Hospital. CVE's scope of work includes: 2 electric bus charging stations; 142 lights on campus; 24 bus station canopies with power, lighting and communications; 6 miles of fiber optic conduit with 60,000 feet of fiber optic cable; signal work at 22 locations; relocation of 4,500 feet of dry utilities.

AGC OF UTAH DIAMOND 5-STAR ACHIEVEMENT OF SAFETY EXCELLENCE AWARD

At CVE, safety is our number one priority. On April 28th, 2022, Cache Valley Electric was presented the AGC of Utah's Diamond 5-Star Achievement of Safety Excellence Award—the highest level possible.

What does it take to earn this recognition? Companies are judged by two criteria. First, the company's OSHA Total Recordable Injury Rate must be 50% below the national average. Second, the company's EMOD Rating, which takes workers compensation expenses into account, must be below the industry standard of 1. Also, to achieve the 5-star rating, CVE had to demonstrate an additional level of measurable safety management—CVE's proprietary mobile CVE App catalogs and tracks all employees' safety certifications and helps monitor jobsite-specific safety requirements.
